Top 3 aaS solutions for a resilient future

The continued frequency and impact of high-profile cyber attacks makes one thing clear: resilience is not a future goal, it's an essential requirement.

Regardless of industry, businesses are facing increasing cyber risk, operational disruption, and regulatory pressure. Simultaneously, they are expected to remain agile, secure, and always available.

As-a-Service (aaS) models provide a scalable way to strengthen security, protect data, and maintain continuity, without the complexity of traditional infrastructure.

At NG-IT, we work with trusted technology partners to design and deliver aaS solutions that help you stay secure, compliant, and resilient in an unpredictable landscape.

Here are three aaS models that form the foundation of a resilient, future-ready IT strategy:

1 Security-as-a-service (SECaaS)

Cyber threats evolve constantly, and reactive security is not enough.

Security-as-a-Service provides continuous monitoring, threat detection, and expert-led response, enabling rapid identification and containment of risks while improving visibility.

Always-on security strengthens protection and removes the burden of managing security in-house.

2 Disaster Recovery-as-a-Service (DRaaS)

When systems go down, business stops.

Disaster Recovery (DR)-as-a-Service ensures applications and data can be restored quickly following disruption, whether caused by cyber incidents, system failure, or human error.

Turn business continuity from a reactive plan into a proven, reliable capability, reducing risk, minimising downtime, and alleviating uncertainty.

3 Backup-as-a-service (BaaS)

Data loss doesn't have to be a crisis.

Backup-as-a-Service provides automated, secure backups stored off-site and protected against deletion, corruption, and ransomware. Data can be restored quickly when needed.

Gain the confidence that your data is protected and recovery assured, all without manual processes or ageing infrastructure.

Is your business ready for what's next?

These three aaS solutions can be combined to create a unified resilience framework, providing a clear path to stronger security, improved operational confidence, business continuity, and long-term resilience.

By working with NG-IT, you'll gain a scalable, cost-effective approach that adapts as threats, regulations, and business needs evolve.

Start building a stronger, more resilient business today.
